A randomized trial of Parkinson's disease across three population-based cohorts

Minh Nguy?n, Thandiwe Okafor, Stefan Johansson

Hypertension have attracted growing attention because of their relevance to both theory and practice. In contrast to earlier studies, our approach accounts for heterogeneity and avoids the usual simplifying assumptions. We find a distinct transcriptional program in the responding group. We discuss limitations of the present study and outline how the methods can be extended.

This is the demonstration PDF of the article.
